ABOUT US

Loris Di Domenico

Nato a Bologna nel 1993

Diplomato all'ITIS O.Belluzzi nel 2012 in informatica

Studente di ingegneria meccanica @ UniBo

Membro del team di formula SAE UniBo Motorsport

Nel tempo libero "Maker"

Vincitore di H-ACK Industry

WHO ARE MAKERS?

I **Maker** sono personaggi interessanti: **non** sono nerd, anzi sono dei tipi piuttosto **fighi** che si interessano di tecnologia, design, arte, sostenibilità, modelli di business alternativi

[M.Banzi]

YOU DON'T REALLY OWN IT
IF YOU DON'T OPEN IT

MAKER PHILOSOPHY

open source hardware

At CERN the open source hardware model is used to improve communications to developers.

At RepRap it's used to spread and collaborate on 3D printer designs.

3D PRINTING

EVERYTHING CAN BE AN OBJECT

VIDEO

GIMME THE 3RD DIMENSION

3D printer creates a **solid object** by building up successive layers of material.

The ink of the printer can be **plastic, clay, metal** and even **chocolate**.

YOU CAN BUILD
EVERYTHING
YOU WANT

The limit is your imagination

Manufacturing

The third industrial revolution

The digitisation of manufacturing will transform the way goods are made—and change the politics of jobs too

Apr 21st 2012 | From the print edition

Like 13k Tweet 3,623

THE first industrial revolution began in Britain in the late 18th century, with the mechanisation of the textile industry. Tasks previously done laboriously by hand in hundreds of weavers' cottages were brought together in a single cotton mill, and the factory was born. The second industrial revolution came in the early 20th century, when Henry Ford mastered the moving assembly line and ushered in the age of mass production. The first two industrial revolutions made people richer and more urban. Now a third revolution is under way. Manufacturing is going digital. As this week's [special report](#) argues, this could change not just business, but much else besides.

A number of remarkable technologies are converging: clever software, novel materials, more dexterous robots, new processes (notably three-dimensional printing) and a whole range of web-based services. The factory of the past was based on cranking out zillions of identical products: Ford famously said that car-buyers could have any colour they liked, as

The second industrial revolution (H.Ford model)

The third industrial revolution (Maker movement)

UNO STRATO DOPO L'ALTRO. Questa macchina, al Wake Forest Institute, sta producendo il prototipo di un rene. Una volta che l'organo è stato progettato, la stampa impiega solo sette ore.

2025 IL CUORE VA IN STAMPA

Con un inchiostro di cellule e proteine, le stampanti 3D già realizzano organi interi. E questo il futuro dei trapianti?

3D PRINTING METHODS

- SLA (Stereolithography)
- **FDM (Fused Deposition Modeling)**
- SLS (Selective Laser Sintering)
- PolyJet photopolymer
- **Syringe Extrusion**
- Other method

HOW IT WORKS?

COMMERCIAL PRINTER

MAKERBOT

Brooklyn, NY - USA

COMPANY INFO

Makerbot was born in 2009, it was one of the first rebrap company.

The printer is fully open source but can extrude only 2 type filament (ABS,PLA).

MakerBot

WASP A PRETTY STORY

WASP born thanks to an idea of Eng. Massimo Moretti with the goal of **saving the world**.

Massimo is an inventor and the CEO of Centro Sviluppo Progetti. He design and produce automatic machines for 20 years.

Now WASP project involves a lot of student that contribute as volunteer.

SHAPEWAYS IS A STORE WHERE YOU CAN SELL WHAT YOU CREATE

MATERIALS

For FDM printer are used round filament and with diameter 1.75 mm or 3 mm

There are several materials.

PLA

(POLYLACTIC ACID)

Extrusion temp: 180°-200°

Adv:

Bioplastic

Low extrusion temp

Dis/age:

Poor mechanical properties

ABS

(ACRYLONITRILE BUTADIENE STYRENE)

Extrusion temp: 220°-240°

Adv:

High details in printed object

Dis/age:

Poor mechanical properties

Toxic

High extrusion temp

NYLON

Extrusion temp: 200°-210°

Adv:

Good mechanical properties

More flexible

Dis/age:

Expansive

When extruded deform

OTHER MATERIALS

- HIPS (High Impact Polystyrene)
- Metal
- Clay
- Experimental materials

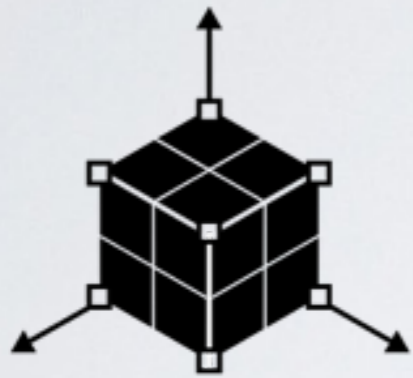

STICK FILAMENT

Modular PLA or HIPS sticks
